

## Maritime Brochure 2025

**Get instant access to our high-quality training simulations powered by the Skill Space Platform**

## Who Are We?

V360 specialise in crafting extraordinary Extended Reality (XR) experiences especially tailored for the maritime, construction, nuclear, logistics, and renewable energy markets.

Our cutting-edge solutions are designed to enhance training, improve safety, and streamline operations in complex environments.

**SKILL SPACE**  
XR PLATFORM

### **Tailored Solutions**

We understand that every industry has unique challenges. Our team collaborates with you to create bespoke XR experiences that meet your specific needs.

### **Innovative Technology**

Leveraging the latest in XR technology, we bring your visions to life, fostering engagement and maximizing impact.

### **Expert Team**

Our team comprises industry veterans and XR specialists dedicated to delivering high-quality experiences that drive results.

XR PLATFORM

## Hydraulic Watertight Door

User learns how to safely operate a pass through a ship's hydraulic watertight door, in normal operation and in emergency / dead-ship mode.

[Click here for video](#)

## Confined Space Pre-Entry

User works through a Permit-to-Work to ensure all safety precautions are signed off, before entry. This includes isolations and atmosphere testing.

[Click here for video](#)

## Windfarm Isolation and Earthing

Operator goes through the comprehensive HV isolation and earthing procedure, following a permit-to-work process, using correct tools from the switchgear.

## 3-Phase Motor Isolating and Insulation Testing

After isolating a vessel's engine room 3ph motor, the user systematically carries out insulation testing using digital testing equipment.

## Engine Room Hazard Awareness

User systematically carries out a safety assessment of a ship's engine room, recording hazards and defects, when found.

[Click here for video](#)

## Engine Room Fire Emergency

User has to react to an engine room fire alarm, starting with isolation of ship systems and communication with the bridge. The simulation continues with fighting the fire with a foam branch and concludes with a search and rescue exercise.

## Generator Synchronisation

From the main switchboard in the vessel's Engine Control Room, the user has to restore power by starting and synchronising generators manually.

## SOPEP – Oil Spill

User is introduced to the ship oil pollution emergency plan equipment and reacts to a fuel spill from the stern of a superyacht.

## Lifeboat Coxswain Training

The user enters a freefall lifeboat and learns the crew and passenger induction and familiarisation. They will learn the layout of the lifeboat and how to perform key functions to ensure safe evacuation.

## What People Say...

*"Probably the best SL course I've attended"*

*"Good course and ability to engage. Would like to see more courses in this format"*

*"Highly Interactive course, learned more than a standard classroom course"*

*"This needs exposure. It is the future of training, much better than 7 hours of PowerPoint."*
